RIVAL American Impression Book

SPACE ADJUSTING, DOUBLE-FACED EXTENSION INDEX.

FLEXIBLE
WATERPROOF BACK,
FLAT OPENING.

MANUFACTURED BY

ROCKWELL-BARNES COMPANY

CHICAGO, ILLINOIS, U. S. A.

READY REFERENCE INDEX

[illegible]

NOTE—DO NOT CONFOUND OUR BOOKS WITH IMITATIONS CHEAP OR OTHERWISE.

SUBJECT INDEX

Indexing Correspondence, irrespective of party addressed. Is of special value when quotations are sent, prices asked for, instructions issued and other advices given or asked for.
———— NOT INTENDED FOR ORDINARY CORRESPONDENCE. ————

[illegible]

PLACE INDEX

Keeping track of the sections of territory to which letters of quotation have been sent. Cities or towns whose Merchants have been written on any subject—Farmers, Officials or others of any section.

[illegible]

The Index Space above can also be used for one or more special correspondents to whom letters are sent almost daily. For this purpose alone it is almost invaluable, as it saves reference to the index in back of book.

READY REFERENCE INDEX

This will enable you to ascertain at a glance the comparative location of a letter written at "about a certain time." Place last page indexed and date under proper month—thus, page 300, Sept. 25, would be Sept. 25-300.

[illegible]

EXTENSION INDEX

In back of book. Familiar to those who have used our books. **OPEN OUT** the Extension Index, when the pages of both book and index can be easily referred to.

THE UNION PACIFIC COAL COMPANY.

Rock Springs, Wyo. December 7th, 1911.

Mr. F. A. Manley,

V. P. & C. Co.,

Omaha, Nebr.

Dear Sir:--

Per your memo of the 5th inst., below please find statement of number of gallons of water used at Rock Springs Mines during the months of September and October 1911, from Green River Water Works and No. 6 Water Works:--

September:--

No. 6 Water Works	3300350 gals.
Green River Water Works	<u>865769 "</u>
Total	4166099 "

October:--

No. 6 Water Works	2525440 gals.
Green River Water Works	<u>1378214 "</u>
Total	3903654 "

Yours truly,

Geo. B. Payson
Mine Superintendent.

THE UNION PACIFIC COAL COMPANY.
Rock Springs, Wyo. December 8th, 1911.

Mr. Frank A. Manley,
V. P. & G. M.,
Omaha, Nebr.

Dear Sir:--

I am enclosing you a letter from State Board of Charities and Reform regarding increase in rates at State Hospital, effective January 1st, 1911.

There is more or less complaint from the patients that we send to this institution, about the unsatisfactory service, and it looks to me that the charges stipulated in this letter are exceedingly high.

I understand the different locals are taking this matter up, and are talking somewhat of a Miners' Hospital here. Some of them say they would be willing to pay more in an institution of this kind, because the treatment and service would probably be better than in a State institution, where often politics play an important part in the selection of the officials. I have talked with Dr. Young to some extent regarding the hospital situation, and he feels that we are not getting as good service as we ought, at the Wyoming General Hospital. He thinks that part of the old barracks could be fitted up as a hospital, at an expense of about \$3000.00 and on account of no political considerations entering into the choice of management, or those who shall direct the affairs of such a hospital, that it could be run more economically.

and afford a greater degree of comfort and satisfaction to the patients who may have to receive treatment.

This, it seems to me, is important to the Coal Company, because if patients are well treated in a hospital, they will be able to get back to work sooner than if they have had indifferent treatment, and spend a much longer time convalescing. I have talked with no one regarding the situation, with the exception of Dr. Young, but I thought it best to take this matter up with you.

It might be well, if you considered a change was necessary, to have the matter taken up with the District President, Mr. Gibson, to find out his views in the matter.

You will note that the charge for use of ambulance is \$5.00. It would not take long to buy one at that rate. We could get a spring wagon and put a cover over it ourselves, and have it located at the mule barn, and when any one was injured, one of the stablemen could take the man to the hospital.

Hoping these suggestions may be of interest to you, I am

Yours truly,

George A. Pyper

Mine Superintendent.

Rock Springs, Wyo. December 18th, 1911.

Mr. F. A. Manley,
V. P. & G. M.,
Omaha, Nebr.

Dear Sir:--

Referring to your letter to me regarding the hospital situation here,-- would say I saw Mr. Monay, and found out that while he had talked the matter over with some of his employees, he had taken no definite action towards doing anything.

Pres. Thos. Gibson being in town on Friday, we met in Mr. Monay's office and discussed the matter. There were present at that meeting,-- Sup't Roberts and hospital commission from Gunn, Mr. Monay and some of commission representatives, myself and some of our representatives.

The meeting decided inasmuch as Mr. Gibson resided in Cheyenne that he be appointed to interview the Board of Charities and Reform, asking information as to the necessity of the proposed raise, and when such information was available that he report back to meeting of representatives.

None of those representing the operators took any active part in the matter of suggestions, leaving that to the other side.

Will advise you if anything new develops.

Yours truly,

George A. Fyler
Mine Superintendent.

C. C. to Jas. M.

✓
THE UNION PACIFIC COAL COMPANY.
Rock Springs, Wyo. December 18th, 1911.

Mr. F. A. Manley,
V. P. & G. M.,
Omaha, Nebr.

Dear Sir:--

Referring to your letter of the 14th inst., regarding the loading of dirty coal for railroad purposes, - would say that I have investigated the matter, and am of the opinion that some of this dirty coal may come from Nos. 7 and 8 Mines. I notice on getting on top of the cars and watching the cars being loaded, that considerable small pieces of slate are to be found in the coal at these mines.

A few years ago, it was found impossible to load clean nut coal at No. 8 Mine, on account of the excessive amount of fine slate mixed with the coal. We have always had a condition at Nos. 7, 8 and 10 Mines, where considerable slate comes with the coal, on account of the coal sticking to the top. On account of the high temperature of the mine air, and the roof slate being very susceptible to the action of this air, the roof scales considerably. I have noticed in some cases as I have travelled through the rooms, that from the time a room was fired by the blaster until it was ready to be shot down, that the roof scales sometimes and the blasters are not as careful as they might be in removing this slate.

Have put a man on top of the Railroad cars at Nos. 7 and 8 to watch the slate and pick it out. Have also given instructions to blasters to be more careful in shooting down rooms where slate may have fallen.

With regard to an excessively large amount of fine coal being loaded with the Railroad coal, I am unable to account for this. This is doubtless the minings from the mining machines, and as this has been loaded for a number of years, I cannot see how there can be any increase, as the cuttings from this source are the same as they have always been. There is probably a little more small coal coming out on account of cleaning the entries. While it is all coal, it doesn't look very good on account of being wet, so I have instructed the Mine Foremen not to send any more of these track cleanings to the surface, but to haul this material up in the old rooms and have it unloaded there.

Will take any further precautions necessary to insure the elimination of these complaints.

Yours truly,

Mine Superintendent.

C. C. to J. N.

THE UNION PACIFIC COAL COMPANY.
Rock Springs, Wyo. December 18th, 1911.

Mr. F. A. Manley,
V. P. & G. M.,
Omaha, Nebr.

Dear Sir:--

Paul Johnston, a Finlander 31 years of age, was instantly killed in 12 pillar, 12 entry, 3 Plane, No. 9 Mine to-day about 9:30 A. M.

There was a prop supporting some top coal and Johnston stood directly under the coal and started to knock the prop out. His partner remonstrated with him for the manner in which he was endeavoring to knock out the prop and told him he would go and get the tamping bar. Johnston paid no attention to the warning, and while hammering at the prop with an axe, the prop was discharged, and top coal fell on him, causing death.

Deceased leaves a widow and three children residing here.

Yours truly,

Geo. B. Payson
Mine Superintendent.

THE UNION PACIFIC COAL COMPANY.
Rock Springs, Wyo. January 18th, 1912.

Mr. F. A. Manley,
V. P. & G. M.,
Omaha, Nebr.

Dear Sir:--

I am in receipt of your letter of December 26th, 1911, regarding the protecting of No. 2 Plane, No. 9 Mine, to face.

In drawing out the entry stumps, pillars have been left so that the aircourse, manway and plane are in good condition from the bottom of plane to a little above 7 entry. Beyond this, there is only plane and plane aircourse left standing, the extension as it was known being only driven double.

The top of the plane is not now accessible, on account of being sealed off. This was done several years ago when fire developed at that point. About two years ago, as a safeguard, it was found advisable to put up additional stoppings at 35 room, so the plane is inaccessible beyond that point.

When I received your letter, I was cleaning up the plane above 7 entry, in order to draw these pillars. In view of the fact that on account of fire, we will be unable to get to top of plane, would you be willing to allow me to take out the coal from 35 room on the plane extension, to a point above 7 entry on the plane, where the hoist is now located. If this would not interfere with any future plans you may have for 2 Plane, it would help the output, as there are now only a few men employed on 7 North entry stumps, all other work being finished.

No. 7 South entry is open to where the fan originally stood, so that there would be an exit from the motor line at foot of plane, to the outside.

Yours truly,

George A. Pryde

Mine Superintendent.

Rock Springs, Wyo. March 24th, 1912.

Mr. Frank A. Manley,
V. P. & G. M.,
Omaha, Nebr.

Dear Sir:--

I have the honor to inform you that on March 23rd, about 2:00 o'clock P. M., S. Miki, Japanese miner, was killed in No. 10 Mine, No. 10 Entry aircourse, No. 4 Slope. He and his partner were mining at the working face, when the rock began working. Evidently both of them tried to run back from where they were working. Miki was first, and as he turned to run, the rock fell and caught him, killing him instantly.

There is a band of rock in the coal seam some 4' 2" from the floor, which runs from 8" to 1' 2" in thickness. The coal is mined and blasted to this band and later this band is taken down to make sufficient height for cars, and it loosens itself, and of necessity must be taken down for safety. The coal above this rock makes a good roof.

Miki's partner did not get away from the face of the air course, and was uninjured, which would seem that had he also stayed at the working face, the accident could have been avoided.

Yours truly,

Geo. R. Dykes

✓
Rock Springs, Wyoming, May 17th, 1912.

Mr. F. A. Manley, Vice Pres. & General Manager
Union Pacific Coal Company,
Omaha, Nebraska.

Dear Sir:-

Yesterday morning at about 8.30 A. M. Charles Byers, Swede, age 40 years, was killed on NO 8 mine by a loaded trip running on to him at 5 plane.

Deceased was discovered by trip rider to be in an intoxicated condition in the man trip; he was helped out of the car and told to go home at 4 plane; later and while trip was being lowered down 5 plane switch, cars were derailed and upon investigation the body of Byers was found under the trip.

Foreman of mine descended shaft early, as assistant was not at work, and finding Byers was not at hand sent a man to fill his place as shot firer for that day.

Tony Erickson, room-mate of Byers states that deceased came into house at 5 o'clock A. M. yesterday, and was urged by Erickson not to make an effort to go to work because of being drunk.

Inquest will be held this evening. I will attend to see that all the facts are brought out. Mine was idle on this account yesterday.

How the man got from 4 to 5 plane is as yet a mystery.

Very truly yours

D. G. Thomas

Mine Inspector.

Rock Springs, May 28th, 1912.

Mr. Chas Durham, Outside Foreman,

Reliance, Wyoming.

Dear Sir:-

I wish you would see to it that all loaded cars from No 3 mine are dumped regularly as they appear so that no question can arise about those miners getting all the cars they can load; the men in this mine are company men, and we desire to get out of them enough to coal to pay their wages.

It looks like every other day for work at Reliance, and I believe it would be a good idea to cut down on all work that must be charged against the coal; this I am satisfied you will do to the best of your ability.

I looked for a large tonnage yesterday and was considerably disappointed at the actual tonnage of 970.

Will go home tomorrow and return with my family Sunday evening.

Very truly yours

D. G. Thomas

13

C O P Y

Cheyenne, May 28th, 1912.

Mr. D. G. Thomas,
Mine Inspector,
Rock Springs.

Dear Sir:--

In reference to the report of the Board of Mine Inspectors, I am instructed to report to Mr. Manley, August 15th, 1912 and January 15th, 1913, what progress has been made in eliminating the following criticisms:

Page 2 - Criticism- Calls attention to loose lagging in No. 9 Mine, exposing miners to fall of rock.

Recommendation- Arrange to have loose rock taken down and additional cross-bars put up so as to make all places safe.

Page 2- C.- Criticises condition of cross-bars and timbers in No. 10 Mine slope, where explosion happened a few years ago. Crossbars thickly covered with dust that is very dry and inflammable.

R.- Arrange to remove dust from cross-bars, would suggest sprinkling slope roof as well as floor and sides of rock will stand water and also to installation of sprays along the slope and manway.

Page 4- C.- Recommends use of portable fire extinguishers and protection of inflammable refuse from stables with fire-proof cloth.

R.- Twenty portable fire extinguishers have been ordered for installation in all mines and additional will be purchased as required. Arrange to cover cars of stable refuse as recommended.

Page 5, C.- Recommends protecting live wires.

R.- Have switches installed so that the same system of switching off current as used in No. 9 Mine can be used in other mines.

Page 5-6, C- Recommends modification in system of mining so that water cartridge can be used.

R.- Experiments similar to those now being made with regard to shearing should be continued and water cartridges should be brought in from Reliance and tried out.

Page 6- C.- Recommends prohibition of use of fine coal for tamping. Recommends use of clay only.

R.- See that this is done at once and that plenty of clay is kept at convenient places throughout the mine. Put this up to the foremen and see that this rule is enforced.

Page 6-7-8 C.- Calls attention to the danger to which a large number of men may be exposed by one or two careless workmen. Emphasizes necessity for the closest kind of supervision of blasting.

R.- Do not think it necessary to put on shot inspectors, but would have the importance of the care in the location of drill holes and minimum amount of powder used be impressed on the blasters and drillers. Mine foreman and assistants should be told to instruct miners, especially in narrow work to use every precaution and careless men should be discharged.

Page 9.-C. Calls attention to dangerous practice noticed in re-loading blown-out shot, and again calls attention to lax supervision of blasting.

R.- Arrange so that a recurrence of the instance mentioned is impossible.

Page 11. C- Recommends concrete instead of rock stoppings.

R- Have concrete stoppings built and get a comparison of the cost of rock stoppings when rock is laid with cement mortar. Concrete stoppings should be reinforced with old rope.

Page 11- C.- Recommends block signals. (Are block signals used in mines to any great extent?)

R.- Arrange signal lights as recommended in one of the mines and if same works out, have it installed in the other mines.

Page 12-C.- Criticizes use of open lights near mining machines where coal dust is in suspension. Recommends prompt attention be given to substitute electric lights in wire protected globes. Recommends covering inflammable refuse from stables with fireproof cloth whilst being hauled under-ground. Recommends prohibition from going into stable with open lights under penalty of discharge and legal prosecution for criminal negligence.

R.- Have electric lamps fixed up so that machine men can connect them to the power line and see if they can be used in connection with mining machines. See that the rules regarding going into stables with open lamps are enforced.

- 13.- C.-Criticizes the use of metal tamping bars. Calls attention to miners handling powder with naked lights in their caps; breakes of discipline in this respect noted. Criticises use of slack mixed with clay, by the miners. This seems to indicate loose supervision.
- R.- Install the new wooden tamping bars as rapidly as possible, better take the metal bars away from the Company men as soon as new wooden bars are received. Have foreman watch the handling of powder, and see that rules are enforced.

Page 13- C.- Recommends copious use of water to avoid danger of ignition of dust in suspension.

- R.- Continue the use of water for sprinkling and have all hauling roads and aircourses kept damp. Would order a number of sprays and have them installed on all intake airways.

Page 13. C.- Recommends that mine superintendents cultivate enthusiasm of men in regard to helmet and first aid practice. Compliments the first-aid crew at Rock Springs highly, but calls attention to want of enthusiasm and drill at other points.

- R.- Continue to encourage the enthusiasm of men in regard to the helmet and first-aid practice. Have helmet team from each mine train once a month and pay men for this work. Additional first-aid boxes are now on order.

Page 14.-C.- Recommends increase in number of helmets; adoption of first aid badge or button.

- R.- Additional helmets will be purchased as improvements in same are made. Badges or buttons will be purchased at any time on your recommendation.

Page 16. C.-,Suggests possibility of economies by using the waste water from the mines for condensing purposes; hints at possible economy of 25% in water bills.

- R.- The propped changes in No. 10 Power Plant may reduce the use of water.

Yours truly,

(Signed) W.D.Brennan

Mine Superintendent.

Rock Springs, Wyoming, May 28th, 1912.

Mr. David Daniels, Mine Foreman

Reliance, Wyoming.

Dear Sir:-

I hardly expect to see you before going to Evanston for my family; in the mean time I wish you would arrange to meet Mr. L. D. Gray and go over with him the proposition of establishing a shot firing system in NO. 1 mine, equipped with suitable wire, lock switches, etc. The idea being that all shots be fired at one and the same time, and from a point of safety outside of the mine.

I see no necessity for continuing the services of the present shot firers for the reason that the miners drill, tamp and arrange all their shots for the blasters; the latter simply going through the mine and igniting the fuse. No judgement is passed on amount of powder used by the men, each permitted to use such an amount as in their opinion will bring down the coal. Such being the case, the miner, at quitting time, might just as well ignite his own fuse.

Do not engage more than one track layer in each of the mines, without further orders from this office.

Very truly yours

D. J. Thomas

MINE SUPERINTENDENT

MINE SUPERINTENDENT

Rock Springs, Wyo. June 1st, 1912.

Mr. W. D. Brennan, Gen'l Sup't,
The Superior Coal Company,
Cheyenne, Wyoming.

Dear Sir:--

Answering your letter of 27th inst., with reference to labor charged against No. 10 Boiler house or No. 10 power plant,--
Mr. Muir, Master Mechanic, is to-day writing you regarding the first paragraph of your letter.

Below is statement, of total amount of labor charged against these two plants during April 1912:--

Total Labor No. 10 Boiler Plant	1114.41
Proportion charged to No. 10 Power Plant	<u>468.05</u>
	646.36

Labor No. 10 Power Plant	392.42
Proportion No. 10 Boiler Plant	<u>468.05</u>
	860.47

The water charged to No. 10 Boilers, estimated on basis of meter readings of Green River Water Works Co., for the last year we used Green River water entirely.
